

# Case Study

## CRJ help Dunton Environmental with landfill redevelopment

### The Customer: Dunton Environmental

Dunton Environmental are market leaders in the design and implementation of ground and water remediation solutions for land restoration. Dunton's applied technologies for contaminated soil and water treatment, together with expert waste management capabilities, deliver measurable cost and programme benefits for their clients.

### The Project: Dunton Environmental were awarded a £1.9 million contract at Kilnwood Vale, West Sussex, by Crest Nicholson.

The site being a former landfill was zoned for re-development for housing. The project involves bulk earthworks with material modification, sorting and further progressing of materials to meet the final placement strategy and specification.

The development of the site will be executed in multiple phases and is expected to last several years.

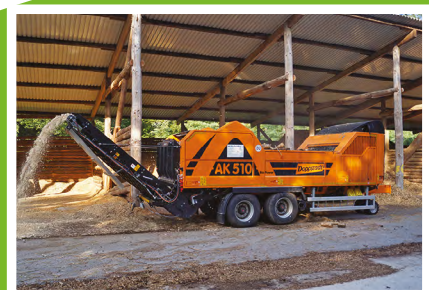

### The Challenge: During the bulk earthworks there was the need to separate deleterious materials from the soils.

### The Solution: Dunton Environmental hired a picking station from CRJ Services for the separation of the deleterious materials from the soils to work alongside Dunton Environmental's screener.

CRJ also supplied the short term hire of Dopstadt AK High Speed Shredder (with an operator) on the site for the shredding of waste wood.

"The machines supplied by CRJ were user friendly and performed very well. The service Dunton Environmental received was first class. All of the staff at CRJ Services were very friendly and very helpful. We hired two items of plant from them and would definitely use CRJ Services again in the future".

Sean Deloughery, Contracts Manager,  
Dunton Environmental
